RESEARCH DIRECTIONS

LLM Agents and Harness Engineering: Tool use, workflow orchestration, and reliable scientific data curation

Agent Evaluation and Improvement: Verifiable feedback, failure analysis, and harness optimization

Generative Modeling: Discrete diffusion, flow matching, and generative modeling of permutations

Computational Biology: Protein language model interpretability and single-cell modeling

EDUCATION

Yale University

Ph.D. in Computer Science

- Advisor: Dr. David van Dijk

University of Michigan, Ann Arbor

Bachelor of Science in Honors Mathematics (Minor in Computer Science)

- Graduated with Highest Distinction
- GPA: 4.0 / 4.0

New Haven, CT

Aug. 2024 – Present

Ann Arbor, MI

Sep. 2019 – May 2023

WORK EXPERIENCE

Chan Zuckerberg Biohub, Inc.

AI Research Scientist Intern

Redwood City, CA

Jun. 2026 – Aug. 2026

RESEARCH EXPERIENCE

Harmony Harness: LLM Agents for Biological Data Curation

- Co-developing **Harmony Harness** to orchestrate specialized agents for GEO DNA methylation data acquisition, phenotype harmonization, study metadata extraction, and methylation matrix processing.
- Engineering the execution harness with dependency-aware workflows, per-agent environments and tool permissions, bounded batch concurrency, and coordinated cancellation of failed runs.
- Implementing **artifact-level quality checks and decision provenance**: recording source evidence and transformation rules, then checking worked examples against independently reloaded outputs to detect unsupported or inconsistent mappings.
- Developing feedback-driven refinement with bounded retries and stopping when repeated issues persist; translating collaborator-reported failures into evidence-priority rules, field-level constraints, and regression checks.

Generative Models and LLMs

- Co-developed **Soft-Rank Diffusion**: reflected diffusion on continuous ranks, a latent reverse sampler with permutation projection, and contextualized Plackett–Luce denoisers. Improved long-sequence sorting and combinatorial optimization over prior permutation diffusion methods. *ICML 2026; co-first author.*
- Co-developed **CaDDi**, which unifies trajectory-conditioned discrete diffusion with causal language modeling. Adapted a **1.5B-parameter Qwen model** with CaDDi-AR and evaluated language-understanding tasks; demonstrated lower generative perplexity than evaluated discrete diffusion baselines. *NeurIPS 2025; co-first author.*
- Co-developed **CaLMFlow**, using a Volterra integral formulation and causal language models to learn continuous flows. Applied it to single-cell perturbation prediction with textual context and evaluated generalization to unseen perturbations.

HONORS & AWARDS

- **Fan Family Fellowship**, Yale University (2025)
- **Outstanding Achievement in Mathematics Award**, University of Michigan, Ann Arbor (2023)
- **James B. Angell Scholar**, University of Michigan, Ann Arbor (2023)
- **University Honors**, University of Michigan, Ann Arbor (2022, 2023)

TEACHING EXPERIENCE

- Teaching Fellow** Yale University
ENAS 1510 Multivariable Calculus for Engineers Fall 2026
- Course Assistant** University of Michigan, Ann Arbor
MATH 285 Honors Multivariable & Vector Calculus Fall 2023

SERVICE

- Journal Reviewer**
- ACM Computing Surveys 2026
 - Transactions on Machine Learning Research (TMLR) since 2025
- Conference Reviewer**
- AAAI Conference on Artificial Intelligence (AAAI) 2027
 - Conference on Neural Information Processing Systems (NeurIPS) 2026
 - International Conference on Machine Learning (ICML) 2026
 - International Conference on Learning Representations (ICLR) 2026
 - AI4MATH Workshop at ICML 2025
